# nabc language for gregorio

The nabc language provides the ability to describe some adiastematic neumes, for now just the St. Gallen and Laon (Metz notation family) style. The language is partially based on Dom Eugène Cardine's Table of neumatic signs, but for more complex neumes doesn't always match how the neumes are called; instead attempts to make it easier to compose complex neumes from basic glyphs. To describe adiastematic neumes in gabc, the header should contain nabc-lines: 1; line, like:

```
nabc-lines: 1;
(f3) AL(ef~|ta>)le(fg/hggf|peclhgpi)lú(ef~|ta>)ia.(f.|ta-) (,)
(ii//|bv-|gh!ivHG//|vi-hhppu2su1sut1|fhg/|to|eef.|pt) (;)
```

The nabc snippets are then separated by | character from gabc snippets or other nabc snippets. Every gabc snippet may be followed by multiple nabc snippets. The maximum number of consecutive nabc snippets is the number declared in the header field nabc-lines: x;. After reaching that number of consecutive nabc snippets another gabc snippet followed by nabc snippets can follow. A single nabc snippet is not split into multiple lines, so for larger melismatic pieces it is desirable to synchronize the gabc snippets with corresponding nabc snippets. With nabc-lines: 1; the gabc and nabc snippets form an alternating pattern, like (gabc|nabc|gabc|nabc|gabc), in this case the last gabc snippet does not have any corresponding nabc neumes. With nabc-lines: 2; the snippets ordering could be e.g. (gabc|nabc|nabc|nabc1|nabc2|gabc|nabc1).

Each nabc snippet consists of a sequence of *complex neume descriptors*. Each *complex neume descriptor* consists of optional *horizontal spacing adjustment descriptor*, then *complex glyph descriptor*, optionally followed by a sequence of *subpunctis and prepunctis descriptors*, optionally followed by a sequence of *significant letter descriptors*.

The horizontal spacing adjustment descriptor consists of a sequence of horizontal spacing adjustment characters / and `.

- // move by nabclargerspace skip to the right
- / move by nabcinterelementspace skip to the right
- `` move by nabclargerspace skip to the left
- `move by nabcinterelementspace skip to the left

The *complex glyph descriptor* consists of a *glyph descriptor*, optionally followed by a sequence of other *glyph descriptors*, all separated by the ! character. This is used to describe more complex glyphs, where certain basic glyphs are connected together.

Each *glyph descriptor* consists of a *basic glyph descriptor*, followed by optional *glyph modifiers*, followed by optional *pitch descriptor*. The following description is for the St. Gall family of neumes, when using the gregall or gresgmodern fonts. For details on Laon (Metz notation family) neumes see 4.

The *basic glyph descriptor* is a two-letter string from the following table:

| vi ∕ virga   | po № porrectus        | tr 🖍 torculus resupinus | tv /// trivirga    | pq ✓ pes quassus        |
|--------------|-----------------------|-------------------------|--------------------|-------------------------|
| pu . punctum | to √ torculus         | st, stropha             | pr 🥕 pressus maior | q1 🛶 quilisma (3 loops) |
| ta_tractulus | ci 🗸 climacus         | ds " distropha          | pi 🧸 pressus minor | qi 🛶 quilisma (2 loops) |
| gr , gravis  | sc 🗸 scandicus        | ts tristropha           | vs 🦯 virga strata  | pt 🥕 pes stratus        |
| cl / clivis  | pf ⋒ porrectus flexus | tg trigonus             | or , oriscus       |                         |
| pe / pes     | sf 🦽 scandicus flexus | bv ∥ bivirga            | sa 🦯 scandicus     |                         |

The glyph modifiers is a possibly empty sequence of following characters optionally followed by a number:

- S modification of the mark
- G modification of the grouping (neumatic break)
- M melodic modification
- - addition of episema
- > augmentive liquescence
- ~ diminutive liquescence

If Dom Cardine's table contains multiple glyphs with the same modifiers, a positive number is added afterwards. E.g. for augmentive liquescent clivis the table shows two different glyphs, the ancus cl> and then another neume - cl>1 s, the first neume does not contain any number after it, while the 1 indicates first variant.

The pitch descriptor allows to specify the vertical position of the neume. There are no staves, so the vertical position is only rough. For pitches the same letters as in gabc are used, a through n and p. If the pitch descriptor is missing, the default is hf, otherwise it consists of the letter h followed by the pitch letter. Within the complex glyph descriptor, each basic glyph descriptor has its own pitch, but in the current fonts there are no glyphs with different relative pitches, so if you use a pitch descriptor on any of the basic glyph descriptors in the complex glyph descriptor, it is best to use the same one on all the other basic glyph descriptors in the same complex glyph descriptor.

The *subpunctis and prepunctis descriptor* consists of the letters su for subpunctis or pp for prepunctis, followed optionally by a modifier letter from the following table and finally a mandatory positive number of repetitions. If the modifier letter is missing, it is a punctum.

- u \_ tractulus with episema
- v \_ tractulus with double episema
- w gravis
- x, liquescens stropha
- y gravis with episema

Only subpunctis are normally used in neume classification, the prepunctis is a nabc concept to describe the rising sequence of punctis, tractulis etc. in the left low corner of some neume. While e.g. vipp2 describes the same neume as sc , the former form allows better control on how many punctis or tractulis or tractulis with episema etc. there are. Some examples: ppt3 stands for 3 raising tractulis with episema, while su1sut1sux1 stands for a punctum, followed by tractulus, followed by liquescens stropha.

The *significant letter descriptor* consists of the letters 1s, followed by a shorthand of the significant letter or common group of them, followed by a number - a rough position relative to the *complex glyph descriptor* glyph with prepunctis and subpunctis attached to it. If more than one *significant letter descriptor* is used on the same *complex neume descriptors* for the same position, then they are ordered in the order they are written in the nabc snippet at that position. The position numbers are:

1 '/ left upper corner2 '/ above the neume3 '/ right upper corner4 '/ to the left of the neume6 / to the right of the neume7 // left bottom corner8 // below the neume9 // right bottom corner

The shorthands, including the ls prefix, which should be followed by the above mentioned position digit:

lsal \_ altius lsiv ⋈ iusum valde lss r sursum 1sam altius mediocriter 1sk k klenche lssb # sursum bene 1sb t bene lsl ! levare lssc / sursum celeriter lsc celeriter 1slb # levare bene lssimil fimit similiter 1scm con celeriter mediocriter lslc 💪 levare celeriter Issimul final simul lsco = coniunguntur lslen 📠 leniter 1ssm / sursum mediocriter lscw \_\_ celeriter (wide form) 1slm to levare mediocriter lsd ← deprimatur lslp 4 levare parvum lssta ≠ statim lse ← equaliter 1slt 1 levare tenere 1st - tenere 1seq 🥃 equaliter 1sm " mediocriter 1stb # tenere bene 1sew - equaliter (wide form) 1smoll mott molliter 1stm --- tenere mediocriter lsfid at fideliter lsp ≠ parvum lstw — tenere (wide form) lsfr ≠ frendor 1spar paratim lsv valde 1sg gutture lspfec perfecte 1svol ...t volubiliter 1spm parvum mediocriter lsi, iusum lsx ⋅ expectare 1spulcre pulcre pulcre lsim : iusum mediocriter

Finally a commented example of a nabc snippet:

```po////pe>2lse7lsl3qlhh!vshhppt1sut2ql>ppu3

N = ol - w= sul

``` stands for a negative horizontal skip (move to the left) by nabcinterelementspace and nabclargerspace.

po *№* is a basic porrectus, at the default pitch (height hf).

//// stands for a horizontal skip (move to the right) by two times nabclargerspace.

pe>21se71s13 \_\_\_\_\_l stands for the 3rd augmentive liquescent form of podatus (epiphonus with tractulus, see the following page) at the default pitch, with equaliter in the low left corner and levare in the upper right corner.

qlhh!vshhppt1sut2 \*\* stands for a 3 loop quilisma joined with virga strata, both at relative pitch 2 above the default one, with a single tractulus before it and two subpunctis - tractulis.

q1>ppu3 نام is a 3 loop liquescent quilisma with 3 tractulis with episema before it.

The *basic glyph descriptor* for Laon neumes is very similar to the one used for St. Gall neumes, but with uncinus and oriscus-clivis added and stropha, 2 loops quilisma and gravis removed:

| un - uncinus        | pe∫ pes               | tr ♪ torculus resupinus | pi ӎ pressus minor |
|---------------------|-----------------------|-------------------------|--------------------|
| vi 🗸 virga          | po ∜ porrectus        | ds distropha            | vs 🗸 virga strata  |
| pu . punctum        | to 1 torculus         | ts tristropha           | or ø oriscus       |
| ta - tractulus      | ci climacus           | tg 1 trigonus           | sa 🦯 scandicus     |
| gr gravis           | sc / scandicus        | bv /- bivirga           | pq 🖍 pes quassus   |
| cl 7 clivis         | pf √ porrectus flexus | tv 🚧 trivirga           | q1 ✓ quilisma      |
| oc ⁴ oriscus-clivis | sf A scandicus flexus | pr 省 pressus maior      | pt .⊚ pes stratus  |

The *subpunctis and prepunctis descriptor* consists of the letters su for subpunctis or pp for prepunctis, followed optionally by a modifier letter from the following table and finally a mandatory positive number of repetitions. If the modifier letter is missing, it is a punctum.

- n r uncinus
- q 🗸 quilisma
- z · virga
- x o cephalicus

The *significant letter descriptor* for Laon neumes allows another position, 5, which stands for inside the neume. The exact position of the letter depends on the glyph, if there is no glyph with the neume inside of it, it can't be positioned inside the neume. The shorthands, including the ls prefix, which should be followed by the above mentioned position digit for Laon neumes are:

```
lsa . augete
                                                                1sn1 .1 non levare
lsc celeriter
                                                                lsnt " non tenere
1seq q equaliter
                                                                1sm ... mediocriter
lseq- ← equaliter
                                                                1smd ...t mediocriter
lsequ ≠ equaliter
                                                                lss r sursum
lsf fastigium
                                                                lssimp ← simpliciter
1sh humiliter
                                                                lssimpl first simpliciter
1shn 🖟 humiliter nectum
                                                                lssp / sursum parum
1shp 5, humiliter parum
                                                                lsst # sursum tenere
lsl:levare
                                                                lst - tenere
lsn " non (tenere), negare, nectum, naturaliter
                                                                1sth tenere humiliter
```

For the Tironian notes the form of the *significant letter descriptor* starts with the lt prefix followed by letters from the following list, followed by above mentioned position digit (5 can't be used):

```
lti ; iusumltsj ; subjiceltdo ; deorsumltsl ; saltimltdr ; devertitltsn ; sonareltdx ; devexumltsp ; supraltps ; prode sub eam (trade subtus)ltsr ; sursumltqm ; quam moxltst ; saltate (salte)ltsb ; subltus ; ut supraltse ; seorsum
```

## manuscript sources of the gregall font

The list of glyphs uses following abbreviations for manuscript references; the page number is always for the start of some antiphon, responsory, mass propers, even when the actual neume is on a later page. At the end of lines, GT stands for Graduale Triplex, Solesmes, 1979, OT for Offertoriale Triplex, Solesmes, 1985, AM for Antiphonale Monasticum, Solesmes, 1934, ARII for Antiphonale Romanum II, Solesmes, 2009 and NR for Nocturnale Romanum, Hartker Verlag, 2002, followed by page number which also contains the corresponding propers, antiphons or responsories.

Most of the glyphs taken from the e-codices Virtual Manuscript Library of Switzerland, http://www.e-codices.unifr.ch/en, with permission from Stiftsbibliothek, St. Gallen http://www.stibi.ch/ and Stiftsbibliothek, Einsiedeln http://kloster-einsiedeln.ch/, the picture fragments from there are only present in the font source file to help drawing the glyphs.

### manuscript sources of the grelaon font

The list of glyphs uses following abbreviations for manuscript references; the page number is always for the start of some antiphon, responsory, mass propers, even when the actual neume is on a later page. At the end of lines, GT stands for Graduale Triplex, Solesmes, 1979, OT for Offertoriale Triplex, Solesmes, 1985, GN for Graduale Novum de Dominicis et Festis, Conbrio Verlag Regensburg, 2011, followed by page number which also contains the corresponding propers, antiphons or responsories.

All the grelaon font glyphs taken from the LAON BM ms239 codex with the permission from the Bibliothèque municipale de la ville de Laon http://manuscrit.ville-laon.fr, the picture fragments from there are only present in the font source file to help drawing the glyphs.

#### Graduale Laudunensis, codex 239
