NAME

xzcmp, xzdiff, lzcmp, lzdiff - compare compressed files

SYNOPSIS

```
xzcmp [cmp_options] file1 [file2]
xzdiff [diff_options] file1 [file2]
lzcmp [cmp_options] file1 [file2]
lzdiff [diff_options] file1 [file2]
```

DESCRIPTION

xzcmp and **xzdiff** invoke **cmp**(1) or **diff**(1) on files compressed with **xz**(1), **lzma**(1), **gzip**(1), or **bzip2**(1). All options specified are passed directly to **cmp** or **diff**. If only one file is specified, then the files compared are *file1* (which must have a suffix of a supported compression format) and *file1* from which the compression format suffix has been stripped. If two files are specified, then they are uncompressed if necessary and fed to **cmp**(1) or **diff**(1). The exit status from **cmp** or **diff** is preserved.

The names lzcmp and lzdiff are provided for backward compatibility with LZMA Utils.

```

BUGS

Messages from the $\mbox{cmp}(1)$ or $\mbox{diff}(1)$ programs refer to temporary filenames instead of those specified.
